

Roatan

March 13-20, 2021

About 30 miles off the northern coast of Honduras lies a precious Caribbean gem: the island of Roatan. The island's dazzling array of marine life can be found on both shallow reefs and plummeting walls.

Roatan, and the rest of the Bay Islands, is part of the southernmost portion of the Mesoamerican Reef, which spans more than 600 miles. It's the largest barrier reef in the Western Hemisphere and the second-largest reef in the world.

From vibrant coral, massive sponges and peaceful eel gardens to schools of tropical fish, fleets of eagle rays and sea turtles — marine life here is abundant and mesmerizing. The island's reefs and drop-offs are teeming with colorful marine life and are ideally suited for novices and experts alike

Not only is diving Roatan amazing during the day, but at night the reef takes on a new look as the nocturnal creatures

become more active, and divers are often treated to views of octopus, unfolding basket stars, spiny lobster and more!
